Customer Priority Legend	
1 – Base Functionality Must Have:	These items must be implemented for the most basic of functions to be accessible. In most cases this will only include the ability to login, create / view posts, and connect with other users.
2 – Base Functionality Should Have:	These items represent secondary functions that mostly affect the capability and use of the application. These Requirements most often include the ability to modify and delete entries and perform actions that would make connecting with other users easier.
3 – Customer Could Have:	These items represent features that would simplify the number of steps for the user to accomplish a certain action. These requirements include things such as providing a list of suggested friends with similar tastes whereas the user could have manually searched for posts matching these tastes.
4 – Customer Nice to Have:	These items represent customer requests which the customer felt were not necessary, but would be additions that would provide some quality of life improvements for the user. These requirements include things such as adding a video to a food post to show how it was made or adding extra verification steps to protect the user's account.
5 - Unnecessary Features:	These items represent additions that would enhance the experience of using the application, but are not necessary for the application to be usable. For example, creating groups of similar interests between friends is a useful feature, but is not necessary for the user to enjoy using the product. Features with a priority of 5 will only be implemented if time permits.

Table of Contents		
Type	SR ## - ##	Page(s)
Account (A)	SR 01 - 08	2 - 3
Networking (N)	SR 09 - 12	3 - 4
Photos (P)	SR 13 - 21	4 - 6
User Interaction (U)	SR 22 - 29	6 - 8
Post Details (D)	SR 30 - 36	8 - 9
Browsing (B)	SR 37 - 46	9 - 11

Category
Account (A)
SR01 Create account
Project Priority: 1 The system shall allow user to create an account with password and username.
Status: Incomplete
Use Case: A1
SR02 Login
Project Priority: 1 The system shall allow user to login with their password and username.
Status: Incomplete
Use Case: A2
SR03 Reset Password
Project Priority: 2 The system shall allow user to reset the account password.
Status: Incomplete
Use Case: A3
SR04 Change Password
Project Priority: 2 The system shall allow user to change password of account.
Status: Incomplete
Use Case: A4
